

Israel Challenge Entrepreneurial Mission

Climate change readiness – Mitigating the Urban Heat Island

9-10 May 2022

Environmental Studies Department
Porter School of the Environment
and Earth Sciences
Raymond & Beverly Sackler Faculty
of Exact Sciences

Attenuating the Urban Heat Island

The Israel Challenge for SME4SMARTCITIES

Dr. Orli Ronen & Avigdor Sharon

Urban Innovation & Sustainability Lab

Porter School of the Environment and Earth Sciences

Tel Aviv University

Project funded by the
EUROPEAN UNION

REGIONE AUTÒNOMA DE SARDIGNA
REGIONE AUTONOMA DELLA SARDEGNA

SME4SMARTCITIES

*Mediterranean SMEs working
together to make cities smarter*

The SME4SMARTCITIES project has been conducted with the financial assistance of the European Union under the ENI CBC Mediterranean Sea Basin Programme

Encourage the entry of Mediterranean SMEs in the smart cities market, involving cities in the co-creation of solutions to their urban challenges

| Focus on demand |

Improve Mediterranean cities, making them more efficient, intelligent and sustainable

Support technological developments

Promote internationalization of technology

A TIME OF CHANGE

our climate is changing but so
is our business and urban
environment

A Global Hotspot

 THE EUROPEAN SPACE AGENCY

Impact on Mediterranean Cities

- The Eastern Mediterranean and North Africa are defined as one of the world's CLIMATE HOTSPOTS
- Casablanca, Tunis, and Alexandria will experience losses of more than 1 billion USD
- Temperature increase of more than 200% is predicted for the Mediterranean region
- Every dollar invested in adaptation will save 8 dollars in recovery and reparations

World Bank Report' 2011

Excess Heat is Captured within Cities - The “Urban Heat Island”

Why is Heat Captured within Cities

The urban morphology - Streets and spaces, the urban “canyon”

Buildings - materials, placement, obstruction of natural ventilation

Heat emission - transport vehicles, air-conditioning, Industry plants

Air Pollution - Increasing the greenhouse effect

Loss of Flora and Green Spaces

URBAN HEAT ISLAND

Dr. Oded Pochter

The Urban Heat Islands of Tel-Aviv Metropolitan Area

A processed image of the TM Thermal Channel (May 5, 1995 22:40)

Dr. Oded Pochter

Givon Square - Radiating Heat

The square paving is much hotter than the people's body heat

Sarona Square - Cooler Environment

The square garden under the trees is much cooler than the people's body heat

Initiatives are showing that change is possible

But the heat is still rising

SMEs drive Large Scale Sustainable Innovation

Can you tip the balance and help reduce the heat?

The challenge - What we Look For

Solutions and interventions that can mitigate the impact of urban elements that increase the heat island

Consequently, reduce the urban heat island effect and alleviate its impact on urban populations

Lead to reduced use of energy for artificial air-conditioning

Methods that can work together in synergy in the urban ecosystem.

The challenge - What we Look For

Solution should be able to work in any standard building or urban space

Use standard internet or mobile communications infrastructure

Provide all the components necessary for it to be operational in the urban environment

Synergy

Participating SMEs

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

BIPV Israel

Applicative Domain

Energy

Proposed Initiative Title

Zero-Energy Building

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

BIPV Israel locates, plan and executes projects in the field of BIPV.

From the vision stages through the implementation of a system that produces green energy integrated to the building.

BIPV Israel is the exclusive distributor of 'Solar Innova' with worldwide experience

'Solar Innova' is a global company engaged in the solar field, developing products that produce energy, improve the behavior of the structure and protect the environment

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

BIPV- Building-Integrated PV is a construction product that integrates PV in building elements, Improved functionalities compared to conventional material- Improve water and air tightness, noise protection, shading, insulation, daylight, and comfort.

Increases the areas where solar energy is generated, and reducing distribution losses in the electricity grid.

Improves the building's behavior in energy consumption, and increases the building's production of electricity.

BIPV can mitigate the urban heat effect and be a part of the solution to reach Israel's renewable energy target: 30% by 2030.

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

What we look for in co-creation

Companies engaged in energy production, energy storage and energy saving.

Companies in the construction and infrastructure industry.

Authorities that promote green building and zero-energy construction.

We look to embrace the sun everywhere and in any design for a better future.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

Bleb Technology srl

Applicative Domain

IoT

Proposed Initiative Title

Co-creation for the Israel challenge

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

The market is demanding Tens of Billions of IoT devices with embedded sensors and actuators: there are many spaces for new ideas

But how to move from the initial idea to the realization of a new device?

Lack of expertise, time to market and development cost often are opportunity killers

Our Vision: “Bricks to build Ideas”

Provide a simple, fast and effective turn-key solution allowing anyone to develop new ideas, IoT Smart sensors and wearable products

Brief Pitch of participating SMEs for the Israel Challenge:

Climate Change - The Urban Heat Island

Company Profile

Instant Prototyping

Just add the functionality you need, combine our **Blebricks** like a LEGO® to create new (IoT) devices

Try It

Use our Software Platform for an immediate validation (PoC)

Produce It

Take our «Fast Route to Production» to seamlessly get your own finished products

 **Blebricks**
Bricks to build your ideas

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

Instant Prototyping to Build custom IoT devices

Battery operating IoT environmental sensor

i.e. set of Blebricks to
measure Temperature,
pressure, RH%, VOCs,
O3, NH2, OAQ (EPA std)

Expert Blebricks

+ bottom housing

+ Top Housing

= IoT Environmental sensor

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

What we look for in co-creation

Participate as a co-applicant with technologies that aim to monitor the effect of urban heat islands

Provide specific sensors to monitor and evaluate improvement in environmental parameters that in addition to measuring local temperatures and humidity levels could also include:

- Solar radiation sensors and wind speedometers to monitor buildings
- Energy absorption sensors to monitor equipment
- Pollution sensors to monitor transportation
- CO2 emissions and leaf moisture to monitor green infrastructure)

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

California Innovation Group

Applicative Domain

Air Quality Control and Pedestrian Safety

Proposed Initiative Title

**Adapting and Improving City environments
threatened by Climate Change**

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Profile

WE SAVE LIVES

California Innovation Group (C.I.G) is a company formed to use the power of smart innovation and technology to help solve global and national challenges connected to environmental, health, safety and all aspects of the wellbeing of citizens.

Using collaborative information, multi disciplinary advanced technology, ideas and a passion to make our world a safer and healthier place, we identify a problem and look for a solution.

We have worked with electric mobility, pedestrian safety and clean air.

Our goal is to combine as many important facets of smart innovation to efficiently and quickly render our planet and our communities healthier, safer, more peaceful and overall better places to live for ourselves and future generations.

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Type of Technologies or Services

Knowledge is power

1. AIR MONITOR EQUIPMENT.

A Smart Innovative technology to measure and provide real time updates on Air Quality.
We can measure up to six different kinds of toxic gases for humans, particles, noise, humidity, wind speed and direction.
With wireless communication using the global mobile network and a choice of power options.
The monitor can be installed where it is required.
This monitor is ideal for smart cities, Schools, Health & Safety, Traffic Management, Transport Hubs.
Understanding and reversing negative effects of Climate Change.

2. SMART CROSSWALK.

Based on a model used in California, USA that incorporates technology and sustainability to create a radical difference in safety, congestion and ultimately in environmental concerns.

3. APP.

An application designed to work in conjunction with the first two items to bring in real time information about safety and accidents and air issues as well as traffic ones to citizens and law enforcements and communities.

SOLUTIONS

We create a safe environment that invites and encourages the people to walk, to exercise and enjoy their surroundings in peace.

Using our three tier technologies we specifically improve the air citizens breath, the streets citizens use and inform them on what is happening in their communities to render their lives overall better.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

What we look for in co-creation

To improve our proposal we need

1. More specific knowledge of the community we are working with.
1. Assistance in tailoring and dispersing the application (APP-AI) to maximize its potential.
1. Funding.
1. Luck.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

CTHal

Applicative Domain

Smart Cities

Proposed Initiative Title

Artificial Intelligence for Intelligent cities

CTHal

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Profile

CTHal provides innovative AI-powered roadside hazards detection systems to municipalities, allowing them to automatically detect and monitor hazards (such as waste piles, green waste, clogged drains, and illegal parking) within the municipal area with minimal human involvement

CTHal

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Profile

- Sophisticate AI system for hazards detection and monitoring.
- Automatic reporting system, designed to work with the municipal existing CRM system.
- Smart camera designed to be mounted on vehicles.

CTHal

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

What we look for in co-creation

Next Steps

- Expand to new markets
- Production level hardware
- Improve our AI model according to customers needs
- Fund raising

CTHal

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

Applicative Domain

Spatial Urban Analytics

Proposed Initiative Title

Green, location-specific solutions for Urban Heat Island (UHI)

Brief Pitch of participating SMEs for the Israel Challenge:

Climate Change - The Urban Heat Island

Company Profile

GISETT's mission is to enable everyone to make smart decisions on location selection taking into account multiple considerations.

Location is a key factor that impacts the success of important decisions regarding planning and mitigating urban environmental problems as well as property development, marketing efforts, business establishment and expansion, logistics, security and more. However, factors affecting a location quality are numerous, dynamic and might change drastically over time, and between individuals, business and organizations. Currently there is no quick-n'-easy, data-driven analysis to evaluate location quality.

The founders have many years of academic and professional experience in analyzing spatial data in the field of urbanism and planning. They have developed ways to analyze spatial data of various sources, types, and themes via a quick procedure that utilizes an easy, comprehensible interface requiring no previous training.

Brief Pitch of participating SMEs for the Israel Challenge:

Climate Change - The Urban Heat Island

Type of Technologies or Services

Our Technology: GISETT developed a groundbreaking technology that process all geo-data types producing sound and highly precise insights on location suitability.

Our Spatial Thematic-Morphologic Analysis (STMA™) technology is sensitive to both geometric intersection between different geospatial datasets (“layers”) and to the thematic data (attributes) stored in those datasets.

This unique ability enables our technology to trace target areas that share a combination of attributes from numerous different geospatial datasets in high precision.

Our Solution: Multi Sectorial Spatial DATA - driven decision - support system!
Our algorithm has the following virtues:

- ✓ Produces accurate results (can pinpoint on a map selected areas and up to a single structure).
- ✓ Use any type of spatial data: qualitative, quantitative, raster, vector etc.
- ✓ Quick operation, with low computing demands.
- ✓ Easy to use : can be operated by anyone; no previous training is required.

Heat map of location match: morbidity (health) and noise levels) in LA

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

What we look for in co-creation

GISETT has a unique technology for answering the WHERE question – we can assess spatial distribution of multifaceted problems (analyzing multiple parameters on the same map frame – for locating "target areas") , and offer mitigation means tailored to location characteristic, pinpointing on the right solutions for different parts of the metro/city level PRECISELY up to the single building level.

We are looking for collaborations with companies offering solutions for the heat island, climate change and other severe problems municipalities are facing that will help us to accelerate value. We can point on the right whereabouts of the solutions of our partners.

We are striving to provide a complete solution for municipalities. Hance will be happy to cooperate with companies that offer appropriate solutions to those problems. We can help you to focus your solution to more effective locations therefore improving your offer as well.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

Haruspex

Applicative Domain

Cybersecurity

Proposed Initiative Title

Smart cities cybersecurity

Brief Pitch of participating SMEs for the Israel Challenge:

Climate Change - The Urban Heat Island

Company Profile

- Established in 2016, after more than 10 years of R&D
- IP-filed own technological solution, able to define the minimum set of countermeasures to neutralize all the attack paths.
- **TECHNOLOGY:** Several technological awards from **Italian Ministry of Defense**, **IBM** (Worldwide award), **NATO** (Cyber War Games)
- **CUSTOMERS:** Among our customers are some of the most important Italian companies, such as the **Italian Presidency of Ministry**, **Fincantieri**, the **Italian Navy**, **Snam**, **Terna**, **Leonardo**.
- Around **1M€ in revenues**, profitable since year-0.
- **12 employees**

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

- Haruspex **Digital Twin**:
 - we create a copy of the topology of the target infrastructure and a digital twin of the attackers
 - we then run hundreds of thousands of simulations
 - Therefore we define the minimum set of countermeasure to completely neutralize the cyber risks.
- The solution is **perfect to secure any smart city tool and infrastructure** from potential malevolent intruders.

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

What we look for in co-creation

- **Partnership** with smart city tools providers
- **Funding** to develop the project

Proposed Initiative Title

Adam Tree Care Application

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

“Ilanot” was established in 2015 when its main business focus is on the urban forest, with Shaul Levi as the CEO & Founder.

Shaul is an urban forester - tree specialist and an arborist certified by the ministry of agriculture since 2019, working for the past 7 years with a wide range of trees and performing a professional tree services in an urban environment.

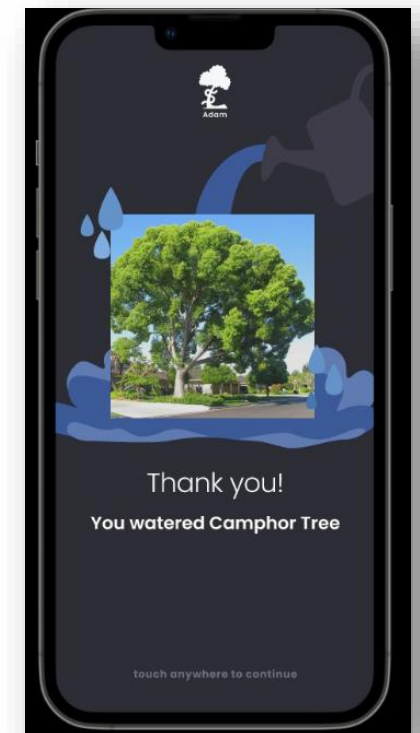

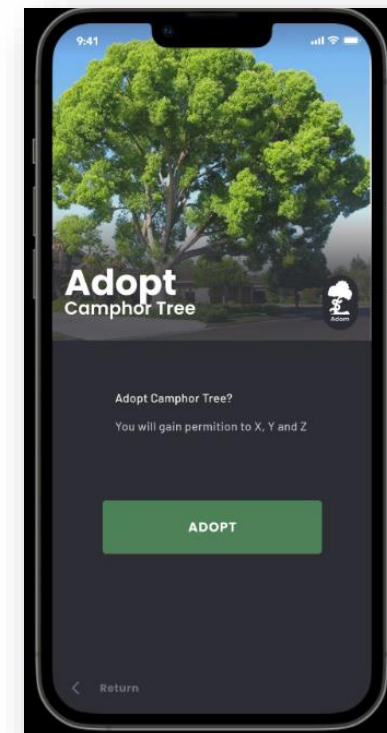

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

Adam app aims to solve problems existing today of poor documentation and tree-care follow up. By embedding Adam, cities will have a strong ability to barricade the heat island effect and could reduce the environment temperature by 4-5 degrees.

For the greater good we need to create a partnership between cities and their communities.

Adam will create a new standard for the city forest on how we must take care of our trees and will help creating a better tomorrow.

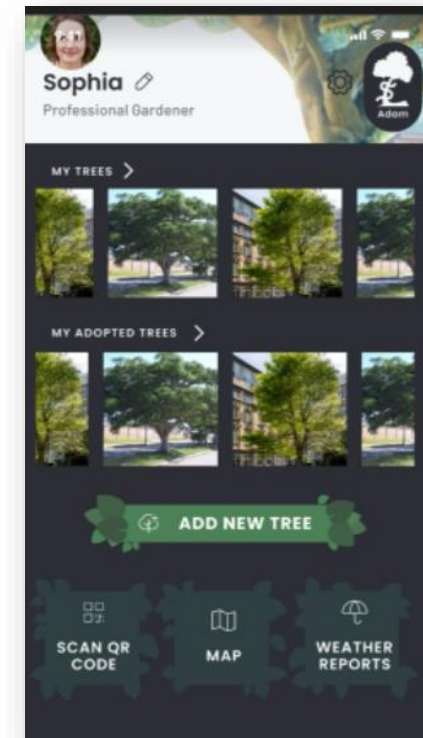

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

What we look for in co-creation

We look for partners that can share experience and knowledge on:

- Connections to city officials to embed the system
- Business Development partners
- Marketing and media partners

Intellicon

Applicative Domain

Traffic intelligence & management

Proposed Initiative Title

TIM

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

Intellicon is engaged in smart transportation sector focusing on traffic intelligence and smart traffic signals

We developed an innovative traffic intelligence system based on crowdsourcing Bluetooth signals from all road users

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Type of Technologies or Services

Our 'Analytix' traffic intelligence system crowdsources Bluetooth signals from all road users and generates abundant traffic intelligence on all road users.

X-Sim simulation tool helps to optimize traffic signals and reduce waiting times at signalized intersections.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

What we look for in co-creation

We look for complementary technologies that can benefit from our traffic intelligence system and vice versa.

Smart city solutions – Video analytic

Proposed Initiative Title

Define and analyze the Climate change from real time video

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

Innovative startup in the 3D image processing based on A.I. and Deep Learning

Developed sophisticated detection software for cameras:

- Smart city Environment - air pollution, fire and smoke detection
- Surveillance - Borders and HLS
- Transportation - Traffic control, road Safety, Low enforcement
- Bridges maintenance - Deflection measurement, Collision prevention

Brief Pitch of participating SMEs for the Israel Challenge:

Climate Change - The Urban Heat Island

Company Profile

- A.I. & Deep learning algorithms adaptable to customer's requests and predefined scenarios
- Stereoscopic detection systems enabling :
 - very high Pd together with an ultra-low FA rate
 - automatic passive systems
 - active 24/7 and in severe weather conditions
 - 3D imaging for space differentiation
- Enables connection to other sensors and/or VMS

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

What we look for in co-creation

Video analytic in real time based on A.I. and Deep learning for any type of camera:

- Traffic monitoring (car counting, lights crossing, bike lanes)
- Air pollution (seaports activities and environment control)
- Safety (bridges safety and collision prevention)

Marketplace for
Urban Open Spaces

QUAD

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

Quad promotes a new future for urban living.

We believe that after accepting the idea of sharing a couch, a room and a whole apartment with other users - now has come the time to share unused open spaces in the city as well.

We find that one's connection to nature and to the community are key elements for achieving a happy, sustainable and healthy lifestyle in urban settings.

That's why we developed a place where everyone can share and rent privately owned open spaces.

QUAD

Brief Pitch of participating SMEs for the Israel Challenge: Climate Change - The Urban Heat Island

Company Profile

Our innovative platform connects landowners with city users, allowing the utilization of these spaces to their maximum potential.

While meeting the users need for suitable and accessible open spaces, land owners benefit from an opportunity to make their property profitable.

AI and machine learning will help reduce the platform's inherent friction – by improving search, helping hosts optimize pricing and preventing fraud.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

What we look for in co-creation

The project key goal: Sustainable CEA
with great produce that tastes amazing and simple to operate.

The future of this project will be quite remarkable. When farming is going high-tech, the future of farms is a sustainable CEA. It took us from the energy market, from renewable energy to urban farming. We believe that this project with high level monitoring, will be the perfect testing round to see what CEA can do for the reduce emissions and increase food security project, related to climate change adaptation and improvement of the city environments.

Strategic Opportunities For The Food Ecosystem

Vertical Farms offer synergistic partnership opportunities for most participants in the food ecosystem

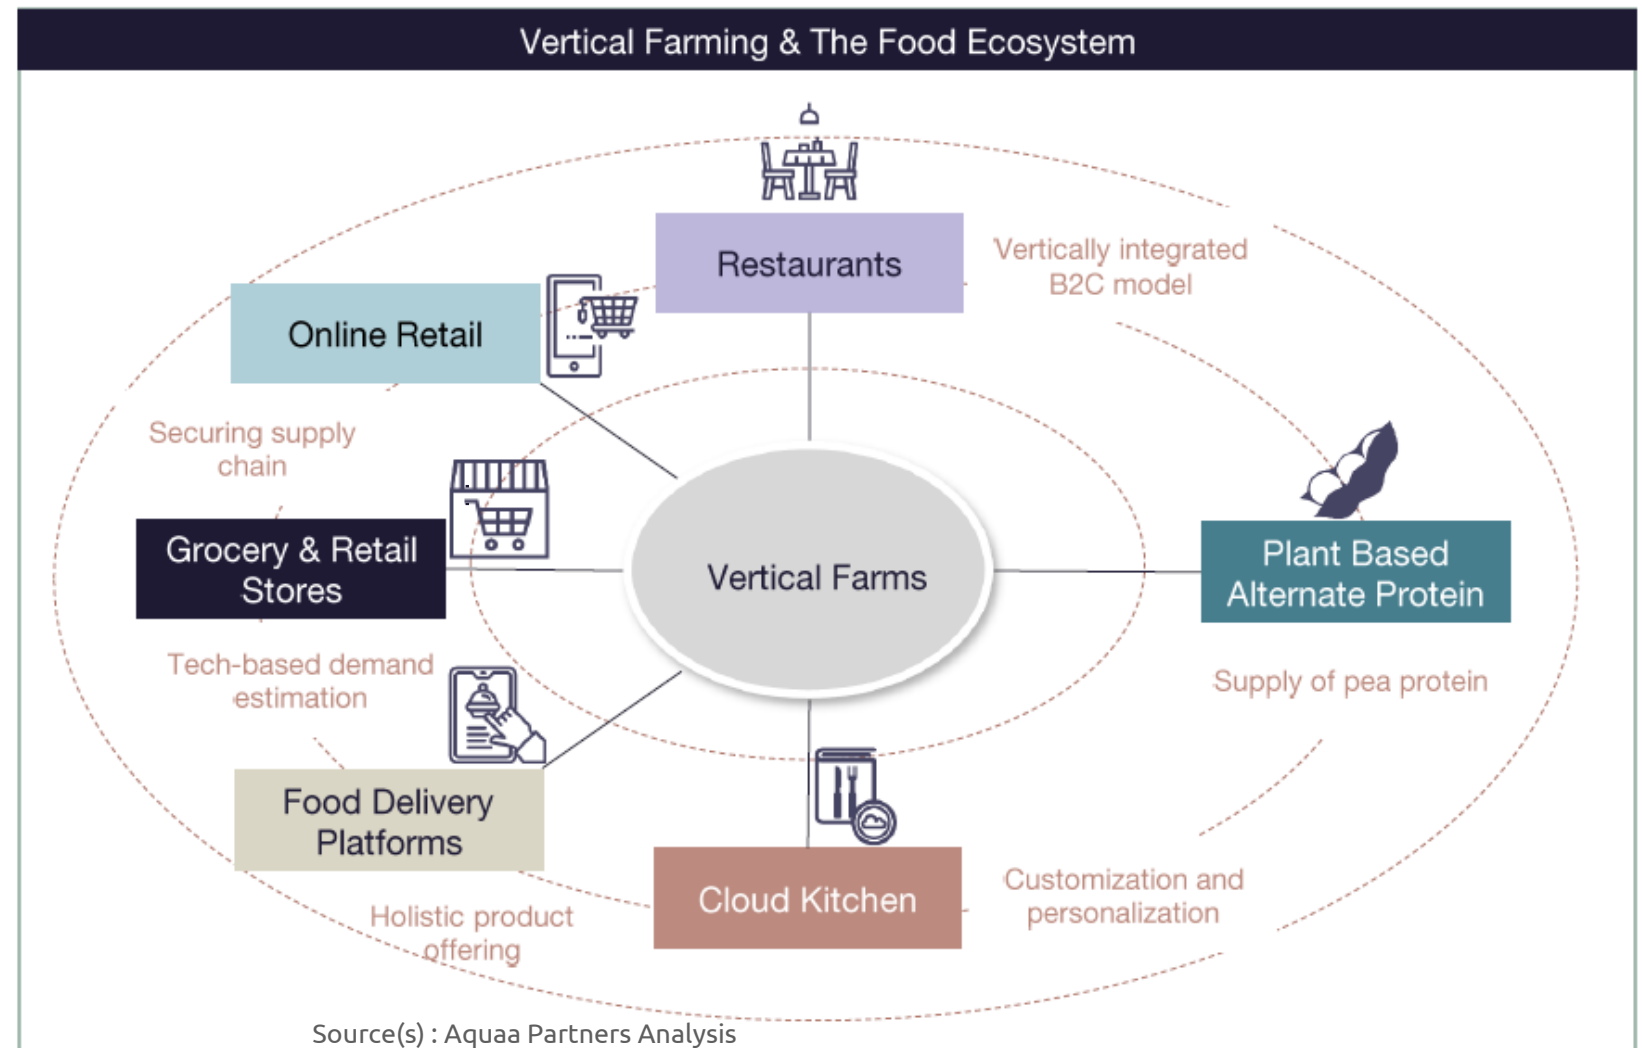

Food Producers

Securing supply of pea and other protein as a key input for plant based alternate protein companies

Food Retail

Vertically integrated B2C model, pivoted around AI, ML, IoT and Robotics, will help meet real time demand

Achieve mass customization and personalization of food based on consumer taste and health preferences

Both upstream and downstream components in the food value chain will gain strategic advantage by partnering with vertical farms

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Name:

Vinea Green

Applicative Domain

Plant growth under controlled conditions

Proposed Initiative Title

Mobile Plant Growth Container

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

Company Profile

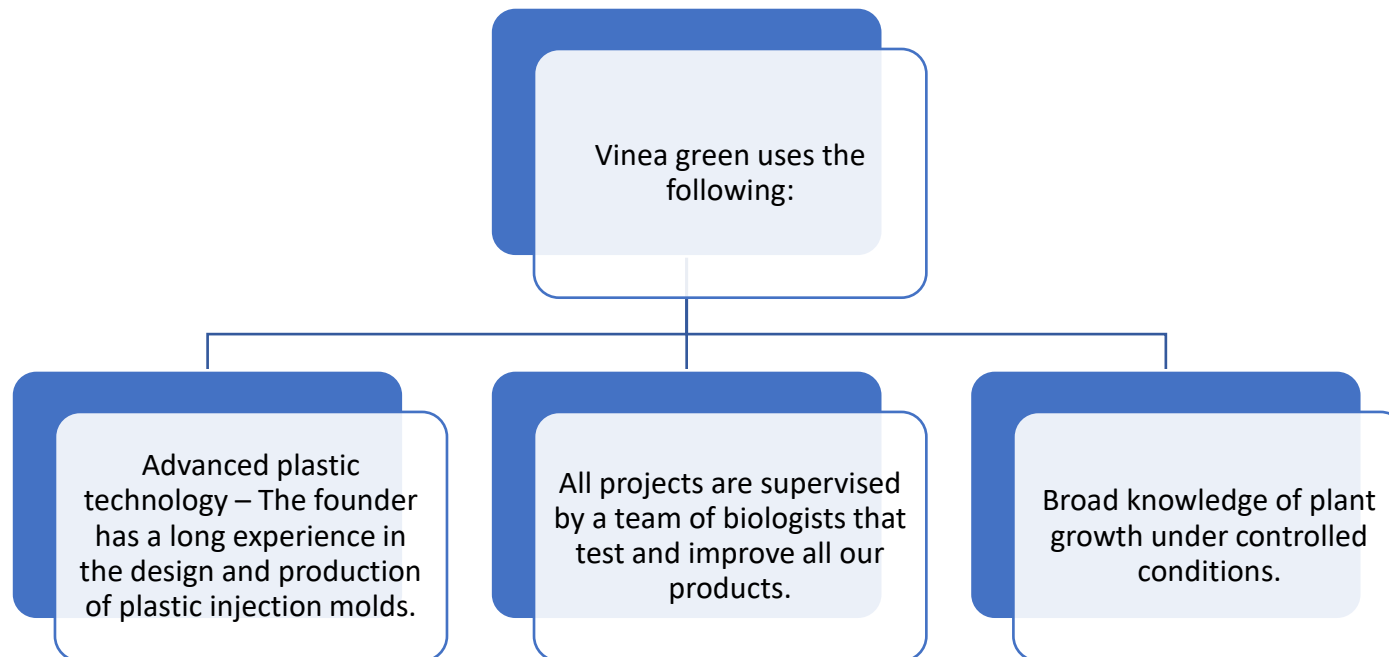

Vinea green specializes in the development, production of modular vertical gardens, living surfaces and hydroponic systems that can be used in small and large scale projects, according to the customer requirements.

Brief Pitch of participating SMEs for the Israel Challenge:
Climate Change - The Urban Heat Island

What we look for in co-creation

1) Automatic control of hydroponic systems:

Water quality (pH, nutrients, oxygen, ORP, etc.)

Temperature

2) Automatic control of air conditions:

Temperature

Humidity

CO2 concentration

3) Looking for a strategic partner in the field of traditional hydroponics farms
