

# Mediterranean Forum For Applied Ecosystem-Based Management

## EB-ICZM Decision Support System in the Four MED4EBM Target Areas

Project Closure Event, Tunis September 21<sup>st</sup>, 2023

## Ecosystem-Based Integrated Coastal Zone Management (EB-ICZM)

an approach that goes beyond examining single issues, species, or ecosystem functions in isolation. Instead it recognizes ecological systems for what they are: a rich mix of elements that interact with each other in important ways

# Ecosystem-Based Integrated Coastal Zone Management (EB-ICZM)

effectively applying EB-ICZM application can be highly demanding for the planning team:

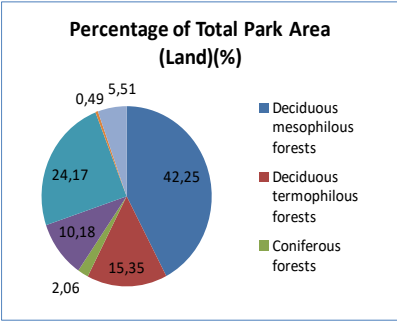

requires intense and continuous efforts to coordinate management actions across a wide array of sectors

harmonization of stakeholders' different viewpoints in multi-sector management planning processes may often bring conflicts

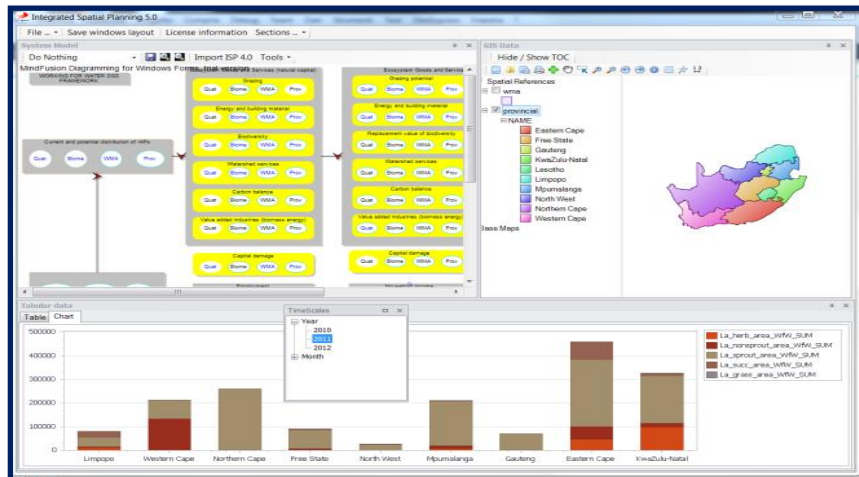

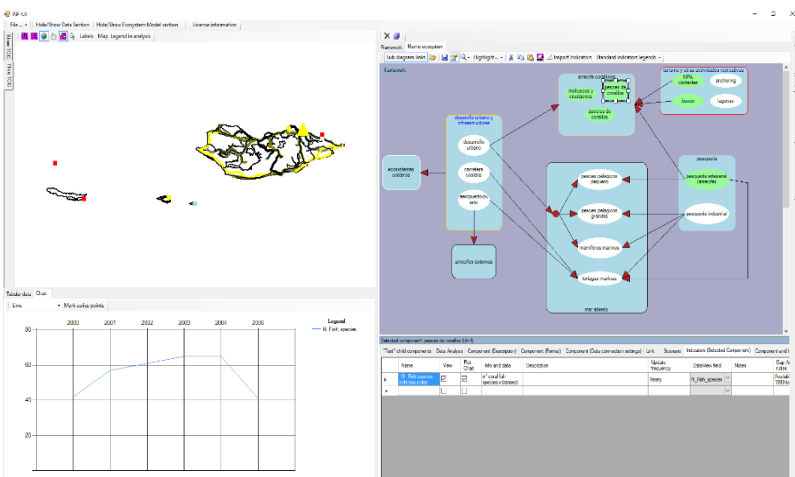

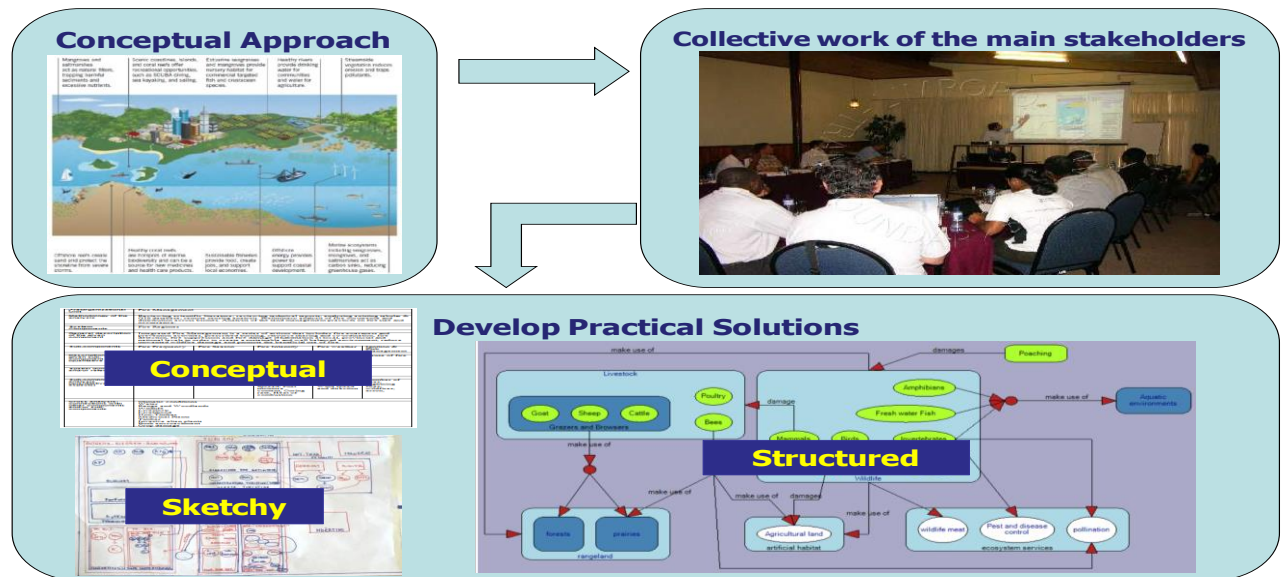

extensive data collection and the handling of large datasets can be a challenging task

MED4EBM has therefore introduced innovative methods and tools to in four target areas in the Mediterranean and the Red Sea:

an operational protocol for the execution of multi-disciplinary ecosystem-based environmental assessments

a software package, linked to spatial and tabular databases, to support the analysis of relevant ecological data and the preparation of synoptic reports

## PROGES-ISP: key methods and tools

**Method:** *Ecosystem context analysis*

**Synthesize scientific, institutional and civil society stakeholders' contribution to model ecosystem structure, functioning and services provision.**

**Tool:** *Context-specific data analysis*

**Method:** *System cause effect analysis*

**Handle, browse, and analyse a diverse array of large datasets in real time.**

**Stakeholders and planning team identify triggers and targets for action.**

**Tool:** *Quick report drafting*

**Monitor programs' performance in real time and draft simple but complete reporting material.**

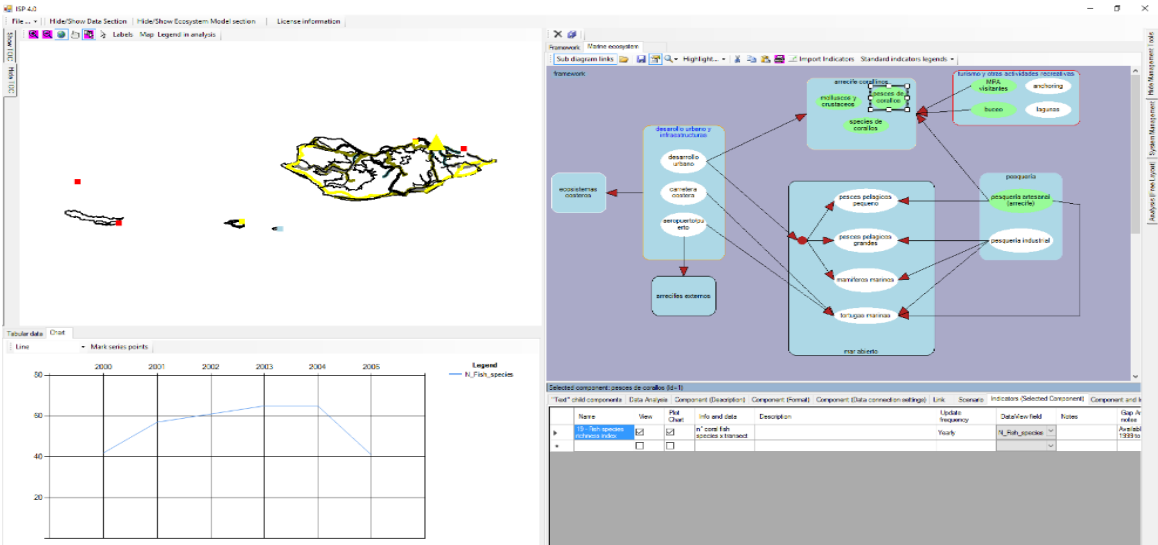

# Ecosystem Context Analysis

## a sequential three stage analytical process

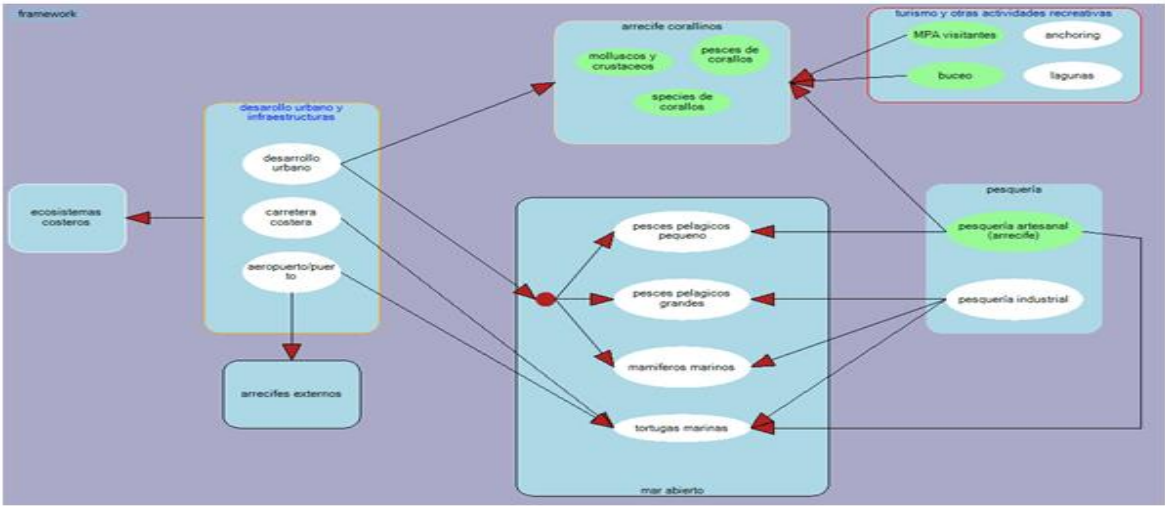

<b>Matriz</b>	<b>Ecosistemas Marinos I</b>															
<b>Methodología de análisis</b>	análisis de los principales hábitats marinos y de las especies de interés natural y económica															
<b>Componentes</b>	mar abierto			arrecifes externos		arrecifes corallinos		otros								
<b>Descripción de los componentes (cualitativa y cuantitativa)</b>				dos islas frente de la playa al oeste de la ciudad		arrecife coralino al oeste de la ciudad (256 km <sup>2</sup> )		.....								
<b>Sub-componentes</b>	peces pelágicos y tiburones		mamíferos marinos		tortugas marinas		No hay		especies de corales		peces de corales		molluscos y crustáceos		.....	
<b>Descripción de los sub-componentes (cualitativa y cuantitativa)</b>	Especies más pescadas: <i>S.commerson</i> , <i>makaira ssp.</i> , <i>T.albacora</i> , <i>E.affinis</i> , <i>K.Pelamis</i>			7 especies de delfines, manatíes		Se encuentran 4 de las 7 especies de tortuga marinas de este océano				253 especies de corales formadores de arrecife 30 especies de corales blandos		Comunidades principales: <i>C.flavoxilla</i> 20%, <i>C.weberi</i> 11%, <i>P.caeruleus</i> 10%, <i>D.marginatus</i> 9%, <i>S.versicolor</i> 8%, ...		.....		
<b>Relaciones con otros componentes</b>	pesquería industrial: la pesca sostenible proporciona alimento, genera empleo y contribuye a la economía local (ver Matriz: Actividades Económicas)			protegen el litoral de tormentas severas		actividades recreativas y turísticas como buceo y pesca deportiva (ver Matriz: Actividades Económicas)		pesquería artesanal (ver Matriz: Actividades Económicas)		.....		.....				

conceptual: system matrixes

quantitative-structural: system-diagram & indicators

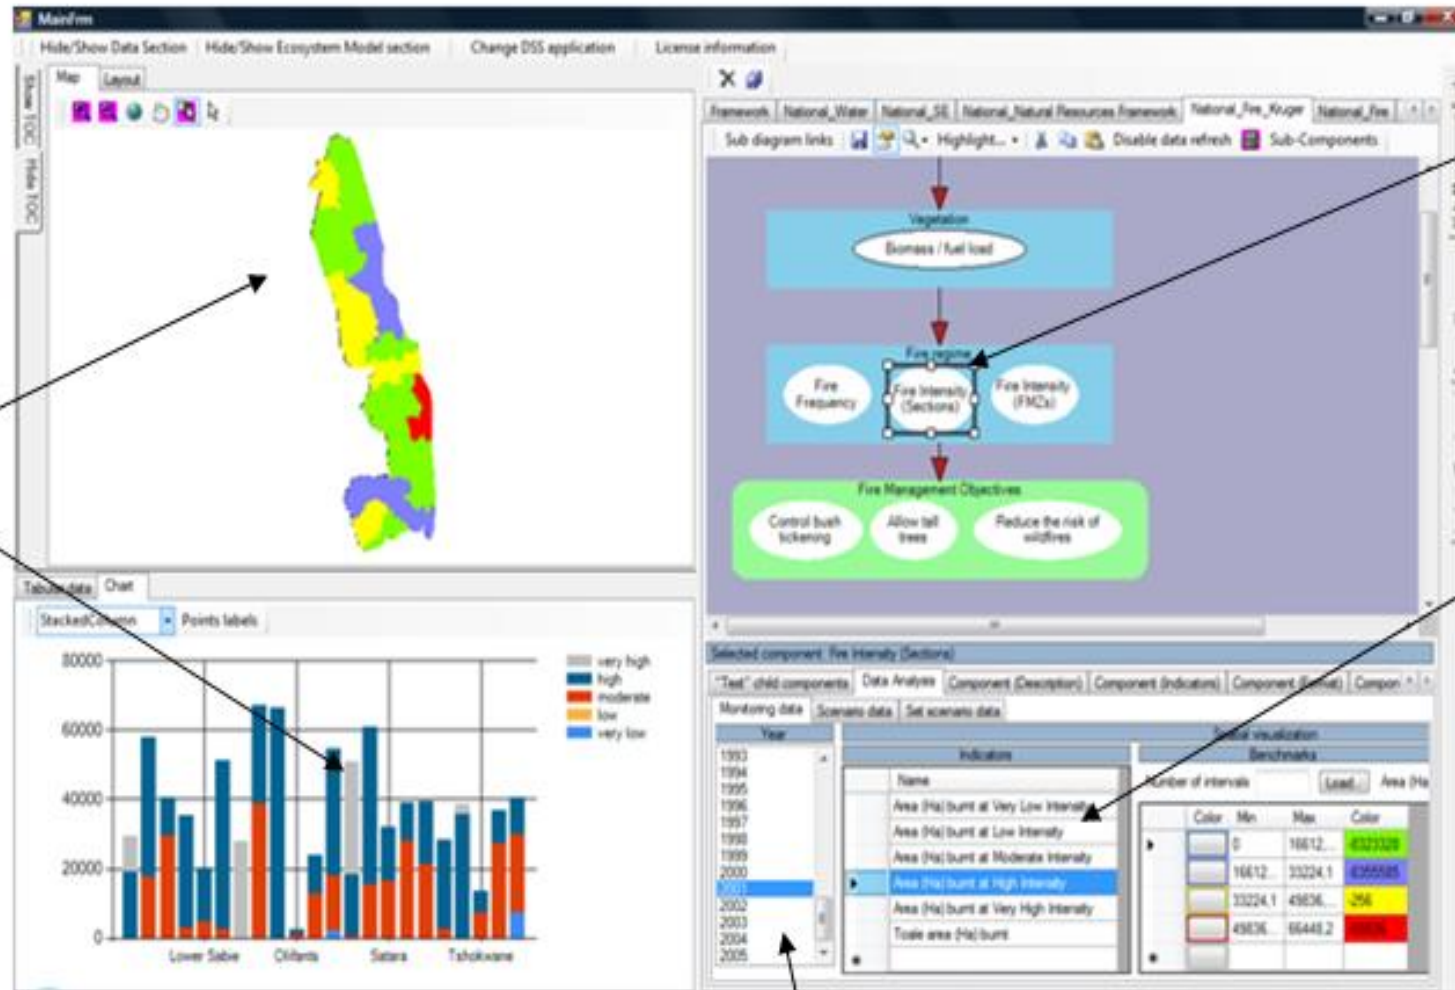

qualitative-structural: system diagram

# Context-specific data analysis

Data defining the different components of the natural management system:

- spatial distribution,
- time trends.

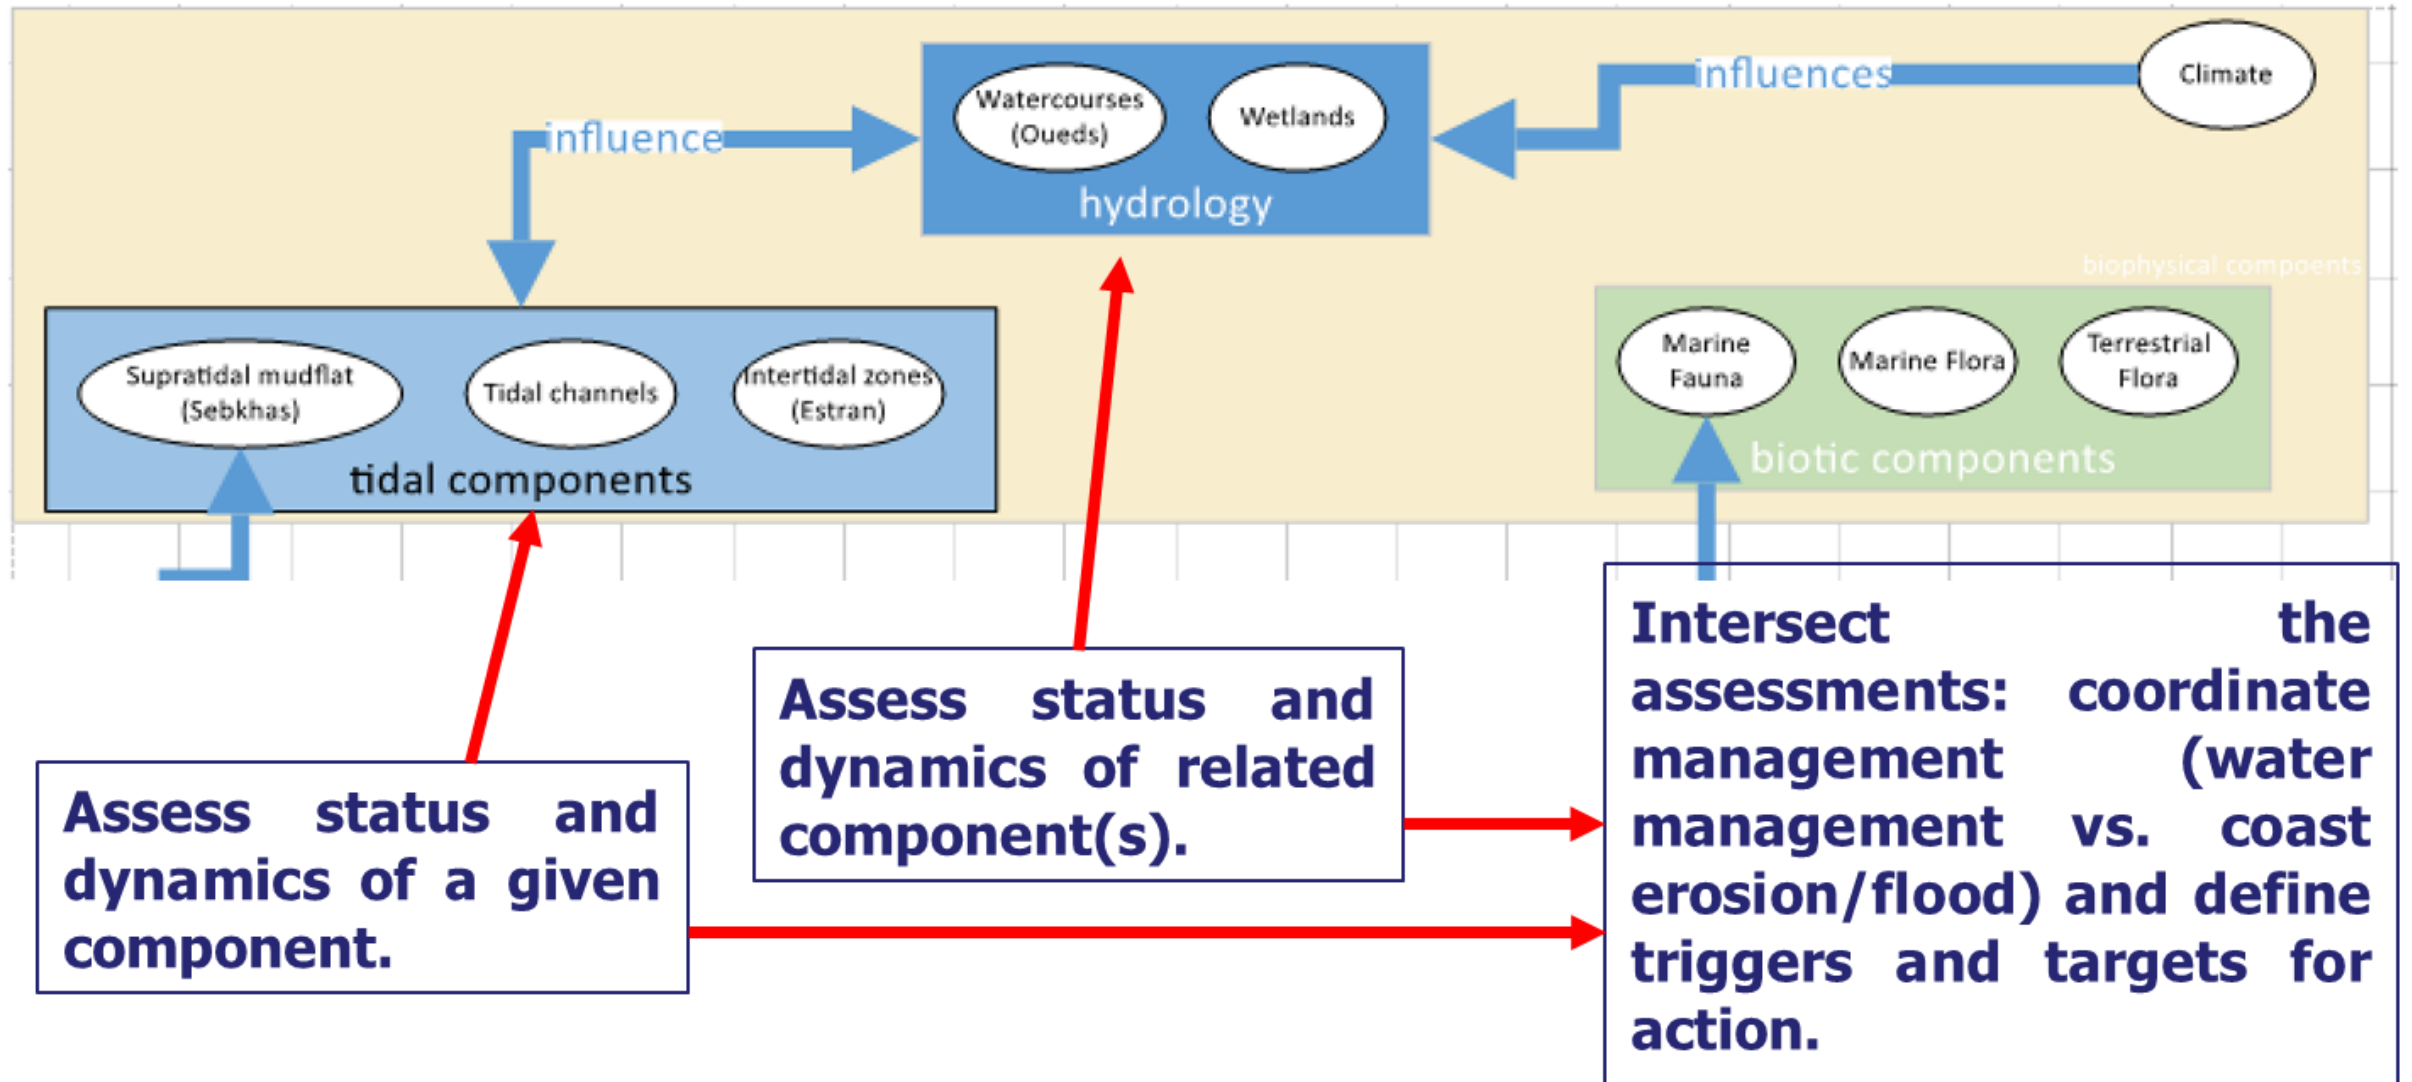

Logical framework defining structure and interactions between the different components of e.g. the natural resources management system.

Quantitative indicators to characterise each system components for the definition of management actions and the monitoring of related achievements.

Maps and charts are updated according to the chosen time frame

# System cause effect analysis

# Quick report drafting

The screenshot displays the MainFrm software interface, which is used for reporting and data analysis. The interface is divided into several sections:

- Map:** A map of South Africa is shown in the top-left corner, with different provinces highlighted in various colors (green, yellow, blue, brown).
- Tabular data:** A data table is visible in the bottom-left corner, showing the distribution of IAPs aggregated by provinces. The table has columns for 'Column' and 'Points labels'. The data is as follows:

Province	Points labels
Eastern Cape	250000000
Gauteng	10000000
Kwa-Zulu Natal	150000000
Limpopo	150000000
North West	10000000
Northern Cape	10000000
Orange Free State	10000000
Western Cape	10000000

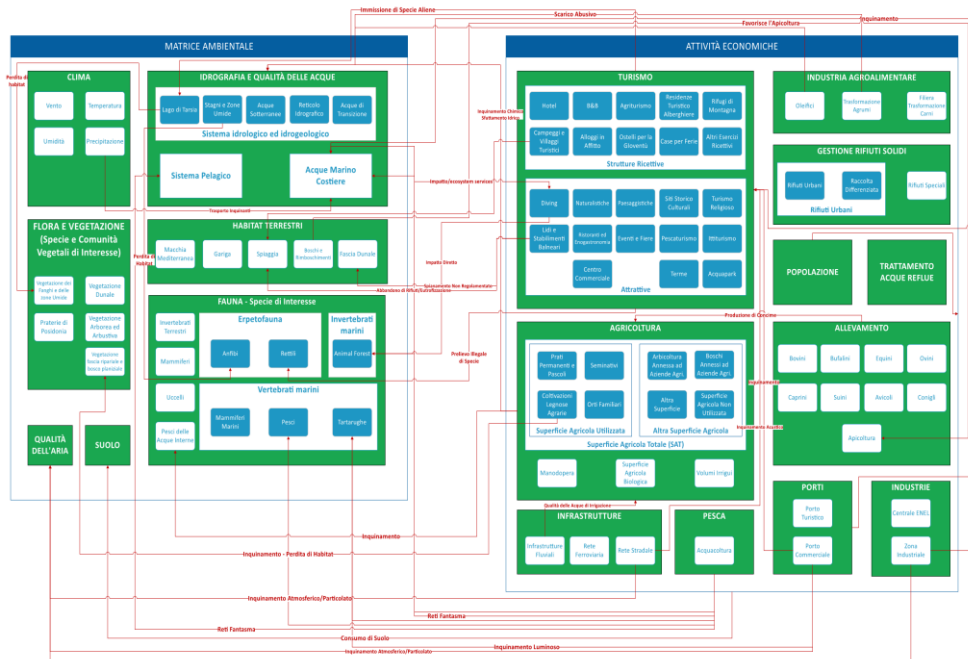

- Chart:** A bar chart is displayed in the bottom-left corner, showing the distribution of IAPs aggregated by provinces. The y-axis represents the number of IAPs, ranging from 0 to 3,000,000,000. The x-axis lists the provinces. The chart shows that the Eastern Cape has the highest number of IAPs, followed by Kwa-Zulu Natal and Limpopo.
- Report Preview:** A report preview is shown in the bottom-right corner, displaying a map of South Africa and a bar chart. The report text reads: "Distribution of IAPs aggregated by provinces [Provincias] shows that the most affected one Eastern Cape (see map and chart here below)." The bar chart in the report preview is identical to the one in the bottom-left corner.
- System Management:** A central panel titled "System Management" contains various components and data analysis options. It includes a "Text" child components section with tabs for "Monitoring data", "Scenario data", and "Set scenario data". The "Scenario data" tab is active, showing a table of available scenarios and data.

Reporting tool: toolbar for importing and/or linking maps, charts and tables.

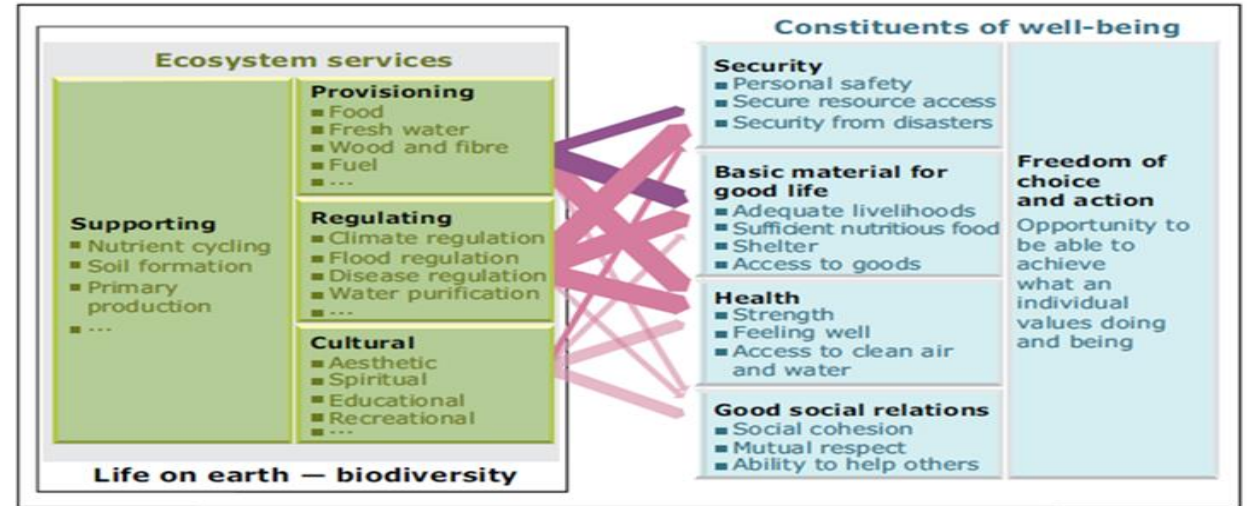

Reporting tool: text Editor with Microsoft Word functionalities.

Real-time analysis of relevant data

## Output / Result: clear and shared EB-ICZM structural model (system diagram)

## Outcome / Change: shared management vision; reduced potentials for conflicts

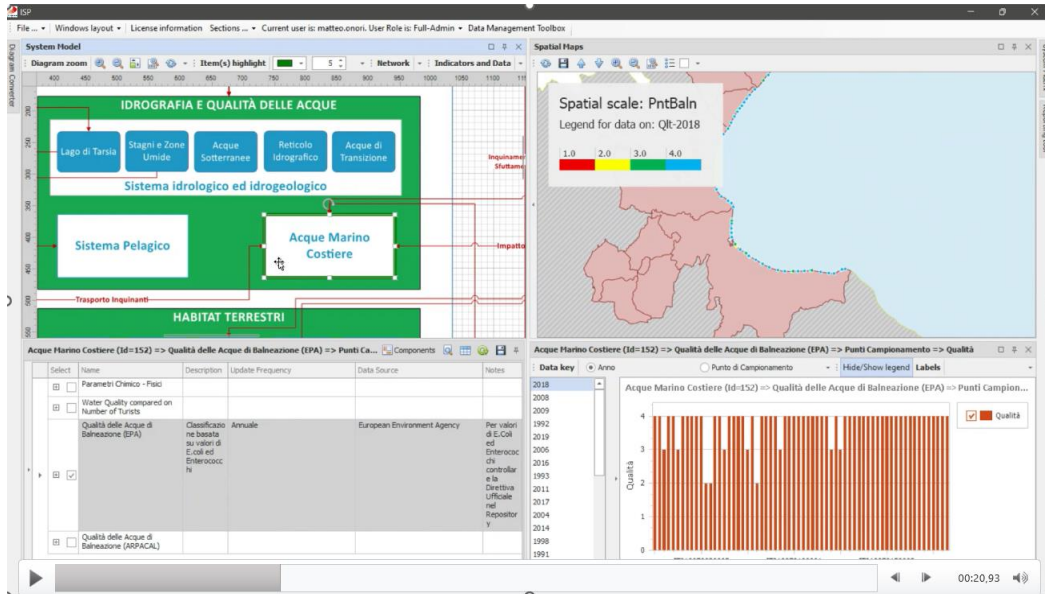

**Arrow's color**  
 Potential for mediation by socioeconomic factors  
 Low Medium High

**Arrow's width**  
 Intensity of linkages between ecosystem services and human well-being  
 Weak Medium Strong

## Output / Result: EB-ICZM-DSS

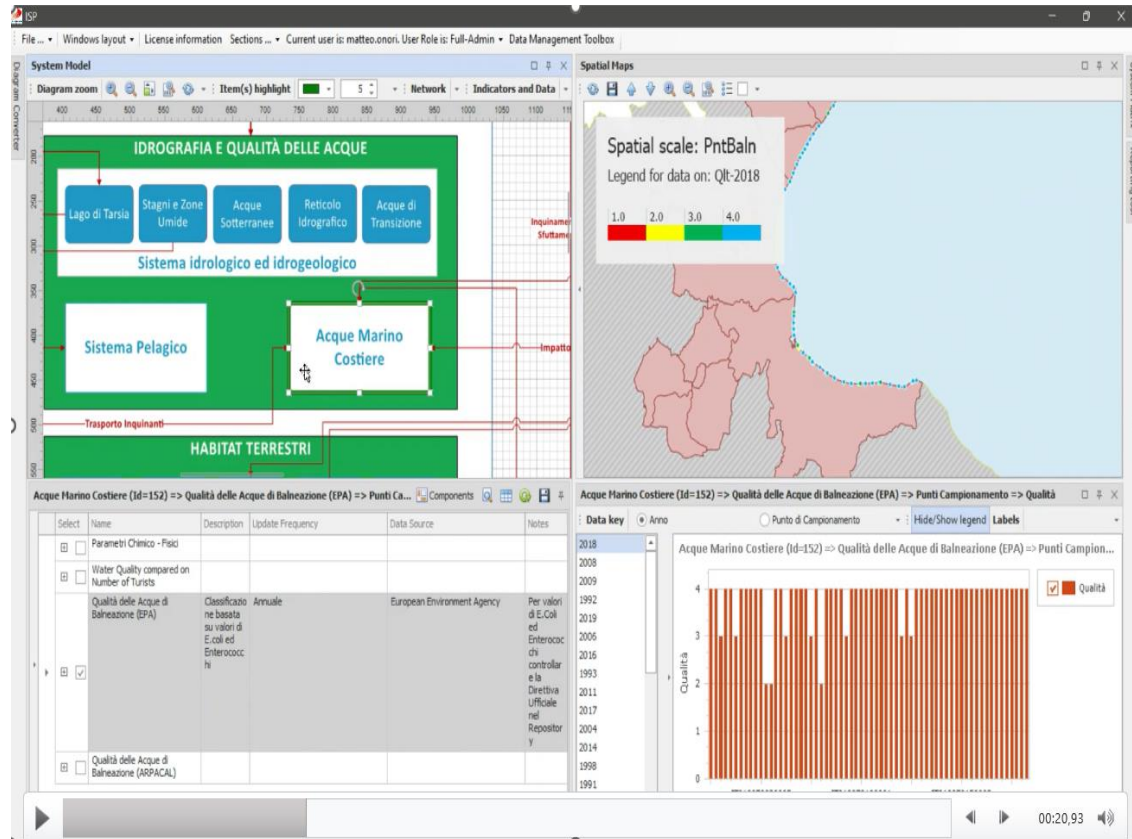

## Outcome / Change: evidence-based analysis and decision making

## Output / Result: EB-ICZM-DSS

Outcome / Change: real-time analysis of diverse arrays of large datasets, effective stakeholders involvement in decision making

**Next slide**

## Output / Result: EB-ICZM Governance Protocols

N.	Component		Direct Interaction with other components		Management options/Governance Protocols
	Name	Quantitative analysis	Related Component	Component quantitative analysis Description of the interaction between components	
1	[Olive groves (Id=122)]	<p>The indicator in the ISP is the production (tons/year), for each delegation.</p> <p>Fluctuations in terms of productions are linked with the rainfall regime and other factors, such as salinity of the natural water resources.</p> <p>Ghraiba has not system of irrigation, the olive groves are watered only by rains.</p> <p>Because the rainfall is not enough, they use water extracted from wells to irrigate the olive trees. They irrigate the olive groves with the well water, despite the fact that the quality of water is not good because the high salinity. This practice needs management because the wells are illegal.</p> <p>(....)</p>	[Rainfall (Id=224)]	<p>(...) The data (average mm rainfall per month) in the ISP are between 2000 and 2019.</p> <p>The rainfalls affect the olive production.</p> <p>Once all the available data are entered, it is necessary verifying if there is a direct correlation between the olive production and the rainfall for each year. <b>Check water stress index for olive tree. Olive production depends on rainfall: If there are rains every year, with good maintenance of the olive trees and early harvesting, a good annual production can be achieved. However, farmers in this region are convinced that the olive tree produces once in two years.</b></p>	<p>1) Legalise and monitoring the wells</p> <p>2) Desalination of well waters</p> <p>3) Subsidies to provide equipment for the proper management of the wells and desalination water</p> <p>4) Investigate if there are other options (see articles)</p> <p>5) Subsidies for the renewal of old olive trees</p>

## Outcome / Change: actual and effective changes in land and sea sustainable development dynamics

***In the longer run: due to delayed and ineffective fund disbursement by ENI CBC MED MED4EBM lost one year of time allocation toward mainstreaming governance protocols in the four target areas***

### MED4EBM Funding: PROGES

Amount (1 <sup>st</sup> pre-financing)	Date (month/year)	Expenditure (as per the 1 <sup>st</sup> interim report)	Total amount of expenses that were not judged as eligible	Funds (not belonging to the project budget) that you have used
EUR 132,215.38	06/2020	EUR 30,074.75	EUR 2,942.00	Funds advanced by PP1 to keep the project alive during the 1 <sup>st</sup> Interim Reporting period (3 Oct. 2019 => 2 Oct. 2020) in addition to the 10% co-funding): EUR 11,741.99
Amount (2 <sup>nd</sup> pre-financing)	Date (month/year)	Expenditure (as per the 2 <sup>nd</sup> interim report)	Total amount of expenses that were not judged as eligible	Funds (not belonging to the project budget) that you have used
EUR 37,913.82	06/2021	EUR 153,400.37	EUR 55,487.74	Funds advanced by PP1 to keep the project alive during the 2 <sup>nd</sup> Interim Reporting period (3 Oct. 2020=> 2 Jan. 2022) in addition to the 10% co-funding): EUR 0.00
Amount (3 <sup>rd</sup> pre-financing)	Date (month/year)	Expenditure (as per the 3 <sup>rd</sup> interim report)	Total amount of expenses that were not judged as eligible	Funds (not belonging to the project budget) that you have used
EUR 13,053.99 EUR 13,910.49 EUR 19,525.83 EUR 8,667,00	12/2021 02/2022 05/2022 06/2022	EUR 120,017.73	EUR 0.00	Funds advanced by PP1 to keep the project alive during the 3 <sup>rd</sup> Interim Reporting period (3 Jan. 2022 => 2 Oct. 2022) in addition to the 10% co-funding): EUR 19,786.60
Amount (4 <sup>th</sup> pre-financing)	Date (month/year)	Expenditure (as of Sep. 1 <sup>st</sup> 2023)	Total amount of expenses that were not judged as eligible	Funds (not belonging to the project budget) that you have used
EUR 46,084.24	08/2023	EUR 56,890.51	0,00	Funds advanced by PP1 to keep the project alive during the 4 <sup>th</sup> and Final Reporting period (3 Oct. 2022 => 2 Oct. 2023) in addition to the 10% co-funding): EUR 46,350.21

## MED4EBM application cases

the following presentations of this session will provide details on how these methods and tools have been applied to establish EB-ICZM decision support systems and governance protocols in the four MED4EBM target areas
