The deadline for submitting bids is the **30th of June 2023**.

More details can be found [here](#).

The **Capitalization for Re-setting Innovation and Sustainability in MED-cities (CARISMED)** Project promotes the uptake of results, to enable cross-sector/border level cooperation. In order to disseminate digital transformation and innovative thinking by training, an integrated Urban Policy will be developed for improving sustainability and integrating innovation into the urban settings at Mediterranean cities (Med-cities) through capitalization of already acquired conceptual and systematic approaches as regards Circular Economy (CE) and Creativity; fostering synergies between MPC-EUMC and piloting collaborative innovation schemes among SMEs clusters.

The cross-border added value of CARISMED relies on the common challenges across the Mediterranean regarding the urban centres' revitalization through CCI SMEs supporting the adoption of Circular practices through innovation, external knowledge inclusion & clustering. Among Med Cities, the adoption of new, smart, and sustainable practices for the restructuring of underutilized or abandoned urban stock in Med cities centres is of utmost importance in order the resilience of cities (economic, social, cultural, technological, etc.) to be enhanced and to achieve a better quality of life in urban areas, also, the inclusion of communities inhabiting city centres in the Mediterranean Basin.
