DEMOGRAFY

The world today is characterized by 4 megatrends: climate change, scarcity of resources, which are not enough for the entire population at the current rate of growth, population growth and the loss of biodiversity of species animals, plants and food.

REGIONAL SUSTAINABLE DEVELOPMENT STRATEGY & REGIONAL ADAPTATION STRATEGY

Why is it necessary to work on strategies? What are the emergencies?

“Today, as we welcome the eight billionth member of our growing human family, we must think about the future. Our world is facing the most crucial and precarious moment in generations. People are being affected by uncontrollable climate change. By 2050, the world's population will approach ten billion. The action or inaction of the G20 will determine whether every member of our human family can live sustainably and peacefully on a healthy planet.”

Antonio Guterrez
Secretary-General of the United Nations
in his speech at the G20 in Bali (15/nov/2022).

We are well aware that emissions have reached high values, which are threatening the survival of mankind because they make the earth more difficult to inhabit. We have reached 420 parts per million of carbon dioxide emissions into the atmosphere.

THE TEMPERATURE OF THE SEA IS OUT OF THE AVERAGE OF THE PERIOD

Humanity is suspended today, like in a frozen image of a famous cartoon in which Willy Coyote stops in the air and understands that he is about to fall.

Pursuing a model of sustainable development is the task of large supranational organizations and governments.

But that's not enough.

In all the great cultural revolutions the task is distributed, by the regional and local Public Administrations, down to the individual citizens.

THE GLOBAL AGENDA FOR SUSTAINABLE DEVELOPMENT APPROVED BY THE UN 2030

In 2015, the United Nations asked each country to plan a strategy involving economic development, social inclusion and environmental sustainability, providing for an integrated action at local, national and international level.

The Global Agenda for Sustainable Development and the related 17 Sustainable Development Goals (SDGs) have been approved, divided into 169 goals (and more than 240 elementary statistical indicators) to be achieved by 2030.

Sustainable development is (also) an approach linked to a different vision of the now unbalanced relationship between economic activity and the natural world, in a finite system.

It is only through the design of new routes of environmental, social, economic, institutional and - ultimately - cultural sustainability that we will be able to enter the future that we want to build in order to survive all together. The secret is to keep everything in balance.

This is our logo, made up of 17 pantone colors from the sdgs. It is a sketchy map like the geographical maps of five hundreds years ago, which we hope will become a very detailed map of Sardinian sustainability in the coming years, thanks to the passionate work of new geographers that we have recruited in the region and in civil society.

The regional governance

SARDEGNA2030: AN OVERALL VIEW

+ SMART

A SMARTER, MORE INNOVATIVE, AND MORE DIGITALISED SARDINIA

1. REINFORCING THE ADMINISTRATIVE EFFICIENCY AND THE DIALOGUE AMONG THE INSTITUTIONS, THE CITIZENS, AND THE STAKEHOLDERS THROUGH INNOVATION IN PUBLIC ADMINISTRATION.
2. FACILITATING ORGANISATIONAL AND PRODUCT INNOVATION PROCESSES, THAT ARE SUSTAINABLE AND COMPETITIVE IN ENTERPRISES.
3. ENCOURAGING THE CONNECTION AMONG ENTERPRISES, RESEARCH CENTRES, UNIVERSITIES, AND HIGHER EDUCATIONAL INSTITUTIONS.
4. IMPROVING DIGITAL ACCESSIBILITY AND STRENGTHENING THE SUPPLY OF DIGITAL PUBLIC SERVICES.

+ GREEN

A GREENER, MORE ECOLOGICAL, AND MORE RESILIENT SARDINIA.

1. PRESERVING BIODIVERSITY, RESTORING AND ENHANCING THE ECOSYSTEM SERVICES.
2. IMPROVING PRODUCTION, QUALITY, AND SUSTAINABILITY OF AGRICULTURAL, LIVESTOCK, AND FISH PRODUCTS AND IMPROVING THE EFFICIENCY OF THE SUPPLY CHAIN.
3. PROMOTING HUMAN HEALTH AND WELL-BEING IN CONNECTION WITH THE ENVIRONMENTAL REMEDIATION OF SOIL, AIR, AND WATER.
4. IMPROVING WATER RESOURCE MANAGEMENT TO CONTAIN EXPOSURE TO THE RISK OF DROUGHT AND HEAT WAVES.
5. IMPLEMENTING INTEGRATED WASTE MANAGEMENT.
6. PROMOTING RESPONSIBLE PRODUCTION AND CONSUMPTION.
7. ACHIEVING SUSTAINABLE TOURISM FOR THE SOCIO-ECONOMIC DEVELOPMENT AND THE PROTECTION OF CULTURE AND BIODIVERSITY.
8. ENSURING A SUSTAINABLE MANAGEMENT OF THE COASTLINE AND THE MARITIME AREA.
9. REDUCING EXPOSURE TO THE RISK OF LANDSLIDES AND FLOODS.
10. IMPROVING THE FIRE PREVENTION AND MANAGEMENT SYSTEM.
11. MAKING PLANNING TOOLS CONSISTENT WITH THE CLIMATE CHANGES ADAPTATION POLICIES.
12. DECARBONISING THE ECONOMY OF HUMAN ACTIVITIES IMPROVING THE EFFICIENCY OF THE ENERGY SYSTEMS.
13. DECARBONISING THE ECONOMY OF PRODUCTION ACTIVITIES.

+ CONNECTED

A MORE CONNECTED AND MORE ACCESSIBLE SARDINIA

1. IMPROVING ACCESSIBILITY TO SARDINIA AND ENSURING TERRITORIAL CONTINUITY.
2. REINFORCING PUBLIC AND PRIVATE SUSTAINABLE MOBILITY.
3. REDUCING THE ENVIRONMENTAL IMPACT AND IMPROVING THE SAFETY OF ROAD INFRASTRUCTURES.
4. STRENGTHENING DIGITAL CONNECTIVITY.

+ SOCIAL

A MORE SOCIAL, MORE EDUCATED, AND MORE PROSPEROUS SARDINIA

1. IMPROVING THE ACCESS TO HIGH-QUALITY EMPLOYMENT AND PROMOTING OPPORTUNITIES OF SELF-EMPLOYMENT.
2. DEVELOPING WORK OPPORTUNITIES AND SERVICES FOR ENTERPRISES AND POPULATION IN RURAL AREAS TO ACHIEVE A WIDESPREAD WELL-BEING.
3. REDUCING SCHOOL DROPOUT AND DISPERSION AND PROMOTING THE RAISING OF YOUNG PEOPLE'S SKILLS.
4. IMPROVING THE FUNCTIONALITY AND SAFETY OF SCHOOL BUILDINGS AND ENHANCING INNOVATION IN EDUCATION.
5. ENSURING HEALTH CARE FOR ALL AND INCLUSIVE ACCESS TO QUALITY HEALTH SERVICES.
6. REDUCING THE GENDRE GAP, PROMOTING ACTIVE INCLUSION, EQUAL OPPORTUNITIES, AND EMPLOYABILITY.
7. PROMOTING SOCIAL INTEGRATION OF PEOPLE AT RISK OF POVERTY OR SOCIAL EXCLUSION.
8. ENSURING HEALTHY AND APPROPRIATE WORKING ENVIRONMENTS.
9. ENHANCING, PRESERVING, AND ENSURING THE AVAILABILITY OF CULTURAL, IDENTITY, AND NATURAL ASSETS.

+ CLOSE

A CLOSER TO CITIZENS, WITH A STRONGER IDENTITY, AND MORE WELCOMING SARDINIA.

1. IMPROVING GOVERNANCE FOR THE TERRITORIAL SUSTAINABLE DEVELOPMENT.
2. COMMUNICATING, EDUCATING, AND RAISING AWARENESS OF SUSTAINABLE DEVELOPMENT.
3. PROTECTING AND ENHANCING THE REGIONAL LANDSCAPE.
4. ENSURING LEGALITY AND JUSTICE.

**THE SHARING OF INFORMATION IS NECESSARY FOR A CORRECT PLANNING OF EUROPEAN FUNDS
IN TERMS OF SUSTAINABLE DEVELOPMENT.**

The real interesting step - unique in Italy - was that the Region administration built the strategy together with the public process of planning European funds, through a process extended to both public and private stakeholders, up to individual citizens.

Regionale committee resolution
n. 39/56 del 08 ottobre 2021

Sustainable development is a very precise system for measuring the performance of a public administration. The strategy has as an attachment a report on the positioning of Sardinia with respect to the other Italian and European regions.

Confronto tra indicatori compositi nazionali e regionali - Anno 2018
 (100 = performance Italia 2010)

HOW IS THE REGION OF SARDINIA POSITIONED COMPARED TO OTHER ITALIAN AND EUROPEAN REGIONS IN ACHIEVING THE SUSTAINABLE DEVELOPMENT GOALS

MATRICE DEGLI INDICATORI E DEI TARGET PER SARDEGNA 2030

OBIETTIVI STRATEGICI	INDICATORI	DATO ATTUALE	TARGET PER IL 2030	FONTE

For each objective and for each line of intervention, the strategy has:

- identified the context indicators, which we will use for periodic monitoring of the Strategy;
- defined the targets to be pursued and achieved by 2030;
- made explicit the pertinent references in the EU programming and the regional development program for an overall and unitary vision.

FIRST GOAL

The Sustainable Development Strategy
manages complexity and is a
PROCESS, NOT PRODUCT

SECOND GOAL

To represent the second objective of the region, you could think to the Romanesco Cauliflower, a figure that contains an internal homothety, and some fractals that represent the modality of how a strategy can repeat itself from the infinitely large to the small, repeating a modality of application of sustainability that starts from the global level, reaches the national level, then the regional level and still down to the municipalities and companies. The same approach to complexity that repeats itself at different levels.

100

**MORE THAN 100 PEOPLE FROM THE ADMINISTRATION OF
SARDINIA REGION ARE PARTICIPATING IN THE CONSTRUCTION
WORKS OF THE SUSTAINABLE DEVELOPMENT STRATEGY**

More than 3300 presences during the
15 public meetings belonging to all civil society

Questions we asked ourselves

Who does social mediation?

How can a PA do social mediation?

Who is part of the networks?

How do you intercept the last ones?

CLIMATICALLY COMPATIBLE DEVELOPMENT

Currently there is a National Adaptation Strategy (SNAC) that defines specific actions and priority criteria.

Also we have since 2019 a regional adaptation strategy, approved with a regional resolution, that should provide a comprehensive framework for all regional stakeholders (public and private) in order to assess the implications of adaptation to climate change in the various sectors concerned.

The process of building the regional strategy starts (born) from a European life project, called MASTER ADAPT, with a partnership of excellence. Through the project, which started in 2015 and ended in 2018, we learned a new trade (before we did not deal with adaptation to climate change).

Mainstreaming climate change strategies and actions within regional and local sectorial planning

Evaluation of future climate scenarios and impact chains, as a methodology for evaluating the adaptive capacity, vulnerability and propensity to climate risk of territories and communities

The regional document is based on the assessment of future climate scenarios and impact chains, as a methodology for assessing the adaptive capacity, vulnerability and propensity to climate risk of territories and communities

NOW THERE IS A
SARDINIA CLIMATE FRAMEWORK (RAINFALL AND
TEMPERATURES) TO 2050

In order to define a general method, it was necessary to investigate some **key sectors**

- **the agro-forestry sector**
- **the water sector**
- **hydrogeological risks of the territory**

Specific Impact Chains have been developed by **regional administration and University of Sassari** for the territory, for the single phenomenon analyzed and the relevant sector.

An impact chain is an analytical tool that helps to deepen, describe and evaluate the factors that drive vulnerability and / or risk appetite in the system of interest.

STRUTTURA GENERALE DELLA CATENA DI IMPATTO (IPCC 2014 b)

ADAPTATION GENERAL GOVERNANCE SCHEME

A complex and effective adaptation governance system capable of managing multi-stakeholder and multi-level relationships in regional, sectoral and territorial policies: "climate control room"; "inter-stakeholder working table"...

GOALS

Implement the adaptation to the CC in ordinary sectoral policies
(plans, programs, programming acts, tenders and financing systems in general)

Implementation of environmental procedures (Strategic Environmental Assessment immediately and Environmental Impact Assessment subsequently) with a view to adaptation

NEW TOPICS

COAST AND TRANSITION ENVIRONMENTS

(cliffs, beaches, lagoons, ponds)

URBAN DEVELOPMENT AND INFRASTRUCTURE

Processing complexity to anticipate the future

Something
About
Sardinian
Green Public
Procurement
(GPP)

GPP is an instrument (in recent years voluntary and compulsory today) for the introduction of ecological criteria in the purchase of goods and services in the Public Administration. Along the entire life cycle, goods and products with low environmental impact: reduce the use of natural resources, reduce the production of waste, reduce polluting emissions, reduce the dangers and environmental risks

Use the buying power to influence the market. A government or a private company can use their purchasing power to influence the market and thus trigger the **process of changing the modes of production and consumption** that is *conditio sine qua non* for the achievement of sustainable development. If the public administration uses this power, it makes green procurement (GPP) and stimulates innovation and competitiveness in enterprises.

GPP is one of the key issues, now and in the near future, in terms of sustainable development. It intercepts many objectives of the 2030 Agenda and is the perfect representation of how green purchasing brings together social (workers' rights), environmental and, of course, economic issues.

GPP is the tool for stimulating innovation.

Green purchasing.

The keys to open up the market.

The opportunity for dynamic companies to overcome the static ones and for the small companies to be competitive with the big.

We start from afar (2005) and approve the first innovative strategy in 2009

The regional action plan: in Italy is the first programming experience in this regard at the regional level.

It provides a budget of
€ 3.200.000,00

Technical assistance: a boarding!

In the first 7 years in particular we activated a service of technical assistance for the implementation of green public procurement policy in Regione Sardegna, dedicated to the regional administration and local authorities and carried out by a consortium, winner of public tender.

Different activities has been implemented (informative seminars, workshops, technical focus groups)

(€ 634.796,25)

INTERNAL TRAINING/INFORMATION

Comparison

Update

Knowledge of new realities

Joint planning of course on GPP issues

EXTERNAL TRAINING/INFORMATION

Order of engineers

Order of architects

(Framework agreement with
professionals to carry out joint actions on GPP)

Municipalities technicians

Responsible for the proceedings

What e how to communicate

SARDINIA BUY GREEN

a communication campaign aimed at a rising awareness of GPP

Reward good practices

C E R T I F I C A T I O N S

The award is intended for organizations that stand out for the implementation of green public procurement.

A certification, such as for household electrical appliances, depending on the level of green purchases made.

We have thought of a sort of certification of excellence for the public administrations that best deal with green purchases, a bit like household appliances or washing machines.

We have replaced all the light fixtures of the public roads of the Municipalities of Sardinia with LED lamps. Those who fly over Sardinia today find it much darker than in past years, not because it is worse lit, but because it is better lit, with the lamps pointing correctly downwards and not upwards and towards every point as in the past.

Example: intervention in the AGRI-FOOD SECTOR

Collaboration with the agricultural department for:

Regional Observatory on catering in Sardinia

Cooperation with associations and regional agencies

Regional network of sustainable canteens

Regional Table for a comparison on catering

Nine out of ten purchases of goods and services for the operation of the region are made with GPP criteria (excluding health and public works).

Education for
sustainability

Education for sustainability

It is a strategy to build and facilitate change through knowledge, awareness, responsible action skills and active involvement of the younger generation and adult citizenry.

It is an idea of the future and works for change, individual, cultural and social. It is a paradigm shift that focuses on values, particularly those of CARE and RESPECT, for others, for the commons, and for the PLANET.

Sustainability education is a cultural and socio-economic tool **TRANSVERSAL** to disciplines and organizations, involving citizens in the enhancement of the commons.

THE SARDINIAN NETWORK

INFEAS

**INFORMAZIONE, FORMAZIONE ED EDUCAZIONE
ALL'AMBIENTE E ALLA SOSTENIBILITÀ**

In Sardinia, over the past 20 years, we have created a network of educators on sustainability financed and coordinated by the Sardinia region.

IN SARDINIA 55 CEAS

(ENVIRONMENTAL AND SUSTAINABILITY EDUCATION CENTERS)

MULTIFUNCTIONALITY

INFORMATION

SUPPORT

SPREAD

TRAINING

LISTENING

CULTURE

ANIMATION

PLANNING

IN SARDINIA we have 55 CEAS (ENVIRONMENTAL AND SUSTAINABILITY EDUCATION CENTERS) that speak to everyone, adults and school children, of multifunctionality, spread, culture, information, training, animation, support, listening, planning.

We have some environmental education projects with schools: one is a project on plastics and the circular economy, one on climate change and fire prevention and one on the enhancement of common goods, financed by the region, for a value of several million euros.

We have some environmental education projects with schools: one is a project on plastics and the circular economy, one on climate change and fire prevention and one on the enhancement of common goods, financed by the region, for a value of several million euros.

I close my speech with the ability to know how to put oneself in the other's shoes: those who work on economic issues must be able to see through the eyes of environmental and social protection and vice versa, one of the ways to deal with complexity and create really value and public interest.
